[How Does a Pressure Tank on a Well Work? | Hunker](#)

Well systems generally consist of the well itself, a pump, a pressure switch for automatic activation of the pump and a pressure tank. The pump sends water from the well to the pressure tank for temporary storage. The pressure tank then holds the water until it is needed in the house.

Pressure tanks generally come in three different forms, those with an air-filled bladder, those with a wafer between the water and the air inside and those with no bladder or wafer at all.

[Water tank air bladder pressure settings: How to Set or ...](#)

For example, if your well pump pressure control switch is set to "cut in" (start pumping water from the well) at 30 psi, then set the pressure tank to $(30 - 2) = 28$ psi. To add air to a pressure tank you can use any source of compressed air - a bicycle pump will do. See WATER TANK AIR, HOW TO ADD for details.
