Although the first electronic health record (EHR) systems appeared as far back as the 1960s and the Institute of Medicine advocated for EHRs in the 1990s, their widespread adoption didn't heat up until 2009. That's when Congress passed the Health Information Technology for Economic and Clinical Health Act, which earmarked \$30 billion for the widespread adoption of EHR technology.

[The Past, Present and Future of Electronic Health Records](#) ...

Mass implementation of electronic health records (EHRs) is presented as a key strategy to reduce expenses and improve quality and continuity of care. But EHRs also introduce new complexity and costs to medical environments, and there is no standardization in methodology to ensure interoperability, efficient execution or adherence to start-up budgets, which can lead to less than optimal adoption of EHR systems. Additional security, coding and billing issues are also large concerns.
